

In this module, we are building a Solar Energy Consulting App:

I have created a Custom Object called “Energy Audits” and the following custom fields:

1. Picklist
2. Lookup -> Account
3. Currency →Cost
4. Number->Usage
5. Text->Audit Notes

Later Lightening App: An app is a collection of items that work together to serve a particular function. In Lightning Experience, Lightning apps give your users access to sets of objects, tabs, and other items all in one convenient bundle in the navigation bar.

Later in this unit, I learned how to create an app using App Manager and list views according to custom criteria.

Compact Layouts:

These layouts help to display the fields on the highlight panel.

Now we are discussing the “Actions” in Salesforce:

We have 2 different actions in Salesforce:

Object-based Actions &

Global Actions Object-Specific Actions: These are limited to a particular object, and Global Actions are those where it isn’t specified to a particular object.
